

Long division exercise with Gaussian integers using 5-adic notation: $(3-4i)/(5+6i)$ .....	1-5
Generalization of the rule that a fixed integer $j$ divides into $(p^{**}N)-1$ for some suitable $N$ .....	5
Acting on an integral basis for the Gaussian integers with a modular matrix and computing the discriminant.....	6-8
An equivalence relationship between elements of an algebraic number field.....	9-16
a) Coordinate transforms on a rank-2 TFA group containing one singularity from a cyclic cubic field	
b) Approximate adelic direction.....	17-32
a) Two non-isomorphic rank-2 TFA groups with a category of frames that may be identical	
b) Do Galois transformations correspond to functors between categories?.....	33-42
Systematic decomposition of a rank-2 TFA group	
a) Total singularity degree	
b) Groups with total singularity degree = 3	
c) Fibration of algebraic number fields	
d) Non-directional component of a rank-2 TFA group.....	43-50
